Chapter 1

Namespace Index

1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

codar	9
codar.cheetah	9
codar.cheetah.adios2_interface	10
codar.cheetah.adios_params	11
codar.cheetah.config	13
codar.cheetah.exc	15
codar.cheetah.helpers	15
codar.cheetah.launchers	19
codar.cheetah.loader	20
codar.cheetah.machine_launchers	21
codar.cheetah.model	21
codar.cheetah.parameters	22
codar.cheetah.pbs	23
codar.cheetah.report_generator	25
codar.cheetah.runners	25
codar.cheetah.status	26
codar.cheetah.templates	27

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

codar.cheetah.report_generator._ReportGenerator	29
codar.cheetah.report_generator._RunParser	32
Exception	
codar.cheetah.exc.CheetahException	45
codar.cheetah.exc.CampaignParseError	44
codar.cheetah.exc.MachineNotFound	58
object	
codar.cheetah.launchers.Launcher	53
codar.cheetah.model.Campaign	37
codar.cheetah.model.Run	83
codar.cheetah.model.RunComponent	89
codar.cheetah.parameters.CodeCommand	46
codar.cheetah.parameters.Instance	49
codar.cheetah.parameters.Param	60
codar.cheetah.parameters.ParamADIOS2XML	63
codar.cheetah.parameters.ParamAdiosXML	66
codar.cheetah.parameters.ParamCmdLineArg	68
codar.cheetah.parameters.ParamCmdLineOption	70
codar.cheetah.parameters.ParamConfig	72
codar.cheetah.parameters.ParamEnvVar	74
codar.cheetah.parameters.ParamKeyValue	78
codar.cheetah.parameters.ParamRunner	80
codar.cheetah.parameters.ParamSchedulerArgs	82
codar.cheetah.parameters.ParameterValue	76
codar.cheetah.parameters.Sweep	100
codar.cheetah.parameters.SweepGroup	102
codar.cheetah.runners.Runner	94
codar.cheetah.runners.RunnerCray	95
codar.cheetah.runners.RunnerLocal	97
str	
codar.cheetah.parameters.SymLink	106
codar.cheetah.parameters.SummitOpts	99

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

codar.cheetah.report_generator._ReportGenerator	29
codar.cheetah.report_generator._RunParser	32
codar.cheetah.model.Campaign	37
codar.cheetah.exc.CampaignParseError	44
codar.cheetah.exc.CheetahException	45
codar.cheetah.parameters.CodeCommand	46
codar.cheetah.parameters.Instance	49
codar.cheetah.launchers.Launcher	53
codar.cheetah.exc.MachineNotFound	58
codar.cheetah.parameters.Param	60
codar.cheetah.parameters.ParamADIOS2XML	63
codar.cheetah.parameters.ParamAdiosXML	66
codar.cheetah.parameters.ParamCmdLineArg	68
codar.cheetah.parameters.ParamCmdLineOption	70
codar.cheetah.parameters.ParamConfig	72
codar.cheetah.parameters.ParamEnvVar	74
codar.cheetah.parameters.ParameterValue	76
codar.cheetah.parameters.ParamKeyValue	78
codar.cheetah.parameters.ParamRunner	80
codar.cheetah.parameters.ParamSchedulerArgs	82
codar.cheetah.model.Run	83
codar.cheetah.model.RunComponent	89
codar.cheetah.runners.Runner	94
codar.cheetah.runners.RunnerCray	95
codar.cheetah.runners.RunnerLocal	97
codar.cheetah.parameters.SummitOpts	99
codar.cheetah.parameters.Sweep	100
codar.cheetah.parameters.SweepGroup	102
codar.cheetah.parameters.SymLink	106

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

__init__.py	109
adios2_interface.py	109
adios_params.py	109
config.py	110
exc.py	110
helpers.py	110
launchers.py	111
loader.py	111
machine_launchers.py	111
model.py	112
parameters.py	112
pbs.py	113
report_generator.py	113
runners.py	113
status.py	114
templates.py	114

Chapter 5

Namespace Documentation

5.1 codar Namespace Reference

Namespaces

- [cheetah](#)

5.2 codar.cheetah Namespace Reference

Namespaces

- [adios2_interface](#)
- [adios_params](#)
- [config](#)
- [exc](#)
- [helpers](#)
- [launchers](#)
- [loader](#)
- [machine_launchers](#)
- [model](#)

- [status](#)
- [templates](#)

5.2.1 Detailed Description

Import most important classes into top level cheetah module namespace.

5.3 codar.cheetah.adios2_interface Namespace Reference

Functions

- def [get_adios_version](#) (xml_file)
- def [set_engine](#) (xmlfile, io_obj, engine_type, parameters=None)
- def [set_transport](#) (xmlfile, io_obj, transport_type, parameters=None)
- def [set_var_operation](#) (xmlfile, io_obj, var_name, operation, parameters=None)

5.3.1 Detailed Description

ADIOS2 Interface

5.3.2 Function Documentation

5.3.2.1 [get_adios_version\(\)](#)

```
def codar.cheetah.adios2_interface.get_adios_version (
    xml_file )
```

Get the ADIOS version of this xml file.

:param xml_file: Path to the adios xml file
:return: 1 (adios version 1) or 2 (adios version 2)

Definition at line 32 of file adios2_interface.py.

5.3.2.2 [set_engine\(\)](#)

```
def codar.cheetah.adios2_interface.set_engine (
    xmlfile,
    io_obj,
    engine_type,
    parameters = None )
```

Set the engine type for an input IO object.

:param xmlfile: String. The ADIOS2 xml file to be modified
:param io_obj: String. Name of the io object which contains the engine
:param engine_type: String. The engine type to be set for the io object
:param parameters: List. A list of dicts containing 'key' and 'value' keys
:return: True on success, False on error

Definition at line 51 of file adios2_interface.py.

5.3.2.3 set_transport()

```
def codar.cheetah.adios2_interface.set_transport (
    xmlfile,
    io_obj,
    transport_type,
    parameters = None )
```

Set the transport type for an io object

:param xmlfile: String. The ADIOS2 xml file to be modified
:param io_obj: String. Name of the io object that contains the engine
:param transport_type String. The transport type for this io object
:param parameters: A dict containing the parameter keys and values
:return: True on success, False on error

Definition at line 76 of file adios2_interface.py.

5.3.2.4 set_var_operation()

```
def codar.cheetah.adios2_interface.set_var_operation (
    xmlfile,
    io_obj,
    var_name,
    operation,
    parameters = None )
```

Set an operation on a variable

:param xmlfile: String. The ADIOS2 xml file to be modified
:param io_obj: String. Name of the io object that contains the engine
:param var_name String. Name of the variable
:param operation String. The operation to be performed on the variable
:param parameters: A dict containing the parameter keys and values
:return: True on success, False on error

Definition at line 100 of file adios2_interface.py.

5.4 codar.cheetah.adios_params Namespace Reference

Functions

- def [adios_xml_transform](#) (xml_filepath, group_name, var_name, value)
- def [adios_xml_transport](#) (xml_filepath, group_name, method_name, method_opts)
- def [xml_has_transport](#) (xml_filepath, transport_type)

5.4.1 Detailed Description

Functions for parsing and editing the ADIOS xml file to enable variable transforms. Transforms include compression and reduction. 'Transform' is an ADIOS specific term.

5.4.2 Function Documentation

5.4.2.1 `adios_xml_transform()`

```
def codar.cheetah.adios_params.adios_xml_transform (
    xml_filepath,
    group_name,
    var_name,
    value )
```

Edit the ADIOS XML file to enable transform (compression/reduction) for a variable

```
:param group_name:    Name of the variable that will be transformed
:param var_name:      Name of the variable that will be transformed
:param value:         Transform type and options (sz, zfp etc.)
:param xml_filepath:  Absolute path of the adios xml file. This will be in
                      the run directory.
```

TODO: add error handling, tests, e.g. for when variable not found in XML file

Definition at line 10 of file `adios_params.py`.

5.4.2.2 `adios_xml_transport()`

```
def codar.cheetah.adios_params.adios_xml_transport (
    xml_filepath,
    group_name,
    method_name,
    method_opts )
```

Definition at line 33 of file `adios_params.py`.

5.4.2.3 `xml_has_transport()`

```
def codar.cheetah.adios_params.xml_has_transport (
    xml_filepath,
    transport_type )
```

Check ADIOS XML file if provided transport method is present for any group

```
:param xml_filepath:  Path to the adios xml file
:param transport_type: Transport type (POSIX, MPI, MPI_AGGREGATE,
DATASPACE, DIMES, FLEXPATH)
:return: True if transport type found, else false.
```

Definition at line 42 of file `adios_params.py`.

5.5 codar.cheetah.config Namespace Reference

Functions

- def [scheduler_path](#) (scheduler_name)
- def [machine_submit_env_path](#) (machine_name)
- def [etc_path](#) (conf_name)
- def [get_dataspaces_num_servers](#) (num_dimes_clients, num_dataspaces_clients)

Variables

- [PACKAGE_PATH](#) = os.path.realpath(os.path.dirname(__file__))
- [DATA_PATH](#) = os.path.join([PACKAGE_PATH](#), "data")
- [CODAR_PATH](#) = os.path.realpath(os.path.join([PACKAGE_PATH](#), ".."))
- [CHEETAH_PATH_SCHEDULER](#) = os.path.join([DATA_PATH](#), "scheduler")
- [CHEETAH_PATH_MACHINE_CONFIG](#) = os.path.join([DATA_PATH](#), "machine_config")
- [WORKFLOW_SCRIPT](#) = os.path.join([CODAR_PATH](#), "savanna", "main.py")

5.5.1 Detailed Description

Cheetah paths and (in future) features for loading site configuration.

5.5.2 Function Documentation

5.5.2.1 [etc_path\(\)](#)

```
def codar.cheetah.config.etc_path (  
    conf_name )
```

Definition at line 29 of file config.py.

5.5.2.2 [get_dataspaces_num_servers\(\)](#)

```
def codar.cheetah.config.get_dataspaces_num_servers (  
    num_dimes_clients,  
    num_dataspaces_clients )
```

Get the number of dataspaces server instances that must be created for a given number of client processes.

Definition at line 33 of file config.py.

5.5.2.3 machine_submit_env_path()

```
def codar.cheetah.config.machine_submit_env_path (
    machine_name )
```

Definition at line 24 of file config.py.

5.5.2.4 scheduler_path()

```
def codar.cheetah.config.scheduler_path (
    scheduler_name )
```

Definition at line 20 of file config.py.

5.5.3 Variable Documentation

5.5.3.1 CHEETAH_PATH_MACHINE_CONFIG

```
codar.cheetah.config.CHEETAH_PATH_MACHINE_CONFIG = os.path.join(DATA\_PATH, "machine_config")
```

Definition at line 15 of file config.py.

5.5.3.2 CHEETAH_PATH_SCHEDULER

```
codar.cheetah.config.CHEETAH_PATH_SCHEDULER = os.path.join(DATA\_PATH, "scheduler")
```

Definition at line 13 of file config.py.

5.5.3.3 CODAR_PATH

```
codar.cheetah.config.CODAR_PATH = os.path.realpath(os.path.join(PACKAGE\_PATH, ".."))
```

Definition at line 11 of file config.py.

5.5.3.4 DATA_PATH

```
codar.cheetah.config.DATA_PATH = os.path.join(PACKAGE_PATH, "data")
```

Definition at line 9 of file config.py.

5.5.3.5 PACKAGE_PATH

```
codar.cheetah.config.PACKAGE_PATH = os.path.realpath(os.path.dirname(__file__))
```

Definition at line 8 of file config.py.

5.5.3.6 WORKFLOW_SCRIPT

```
codar.cheetah.config.WORKFLOW_SCRIPT = os.path.join(CODAR_PATH, "savanna", "main.py")
```

Definition at line 17 of file config.py.

5.6 codar.cheetah.exc Namespace Reference

Classes

- class [CampaignParseError](#)
- class [CheetahException](#)
- class [MachineNotFound](#)

5.6.1 Detailed Description

Exceptions.

5.7 codar.cheetah.helpers Namespace Reference

Functions

- def [make_executable](#) (path)
- def [swift_escape_string](#) (s)
- def [parse_timedelta_seconds](#) (v)
- def [copy_to_dir](#) (source_file, dest_dir, follow_symlinks=True)
- def [copy_to_path](#) (source_file, dest_file, follow_symlinks=True)
- def [is_executable](#) (fpath)
- def [copytree_to_dir](#) (source_dir, dest_dir, follow_symlinks=True)
- def [relative_or_absolute_path](#) (prefix, path)
- def [relative_or_absolute_path_list](#) (prefix, path_list)
- def [get_immediate_subdirs](#) (dir_path)
- def [dir_size](#) (path)
- def [get_file_size](#) (dir_entry)
- def [is_campaign_directory](#) (path)
- def [require_campaign_directory](#) (path)
- def [json_config_set_option](#) (filename, key, value)

5.7.1 Function Documentation

5.7.1.1 `copy_to_dir()`

```
def codar.cheetah.helpers.copy_to_dir (
    source_file,
    dest_dir,
    follow_symlinks = True )
```

Wrapper around `copyfile` with directory destination and more control over permissions.

Definition at line 80 of file `helpers.py`.

5.7.1.2 `copy_to_path()`

```
def codar.cheetah.helpers.copy_to_path (
    source_file,
    dest_file,
    follow_symlinks = True )
```

Wrapper around `copyfile` that respects `umask` and preserves executability.

Definition at line 94 of file `helpers.py`.

5.7.1.3 `copytree_to_dir()`

```
def codar.cheetah.helpers.copytree_to_dir (
    source_dir,
    dest_dir,
    follow_symlinks = True )
```

Custom version of `copytree` that does not preserve permissions, but does preserve executability. The goal is to respect the current `umask` but keep executable files executable.

Definition at line 112 of file `helpers.py`.

5.7.1.4 `dir_size()`

```
def codar.cheetah.helpers.dir_size (
    path )
```

Get the size of the directory represented by path recursively.
:param path: Path to the dir whose size needs to be calculated
:return: size in bytes of the dir

Definition at line 151 of file helpers.py.

5.7.1.5 `get_file_size()`

```
def codar.cheetah.helpers.get_file_size (
    dir_entry )
```

Get size of the file or directory pointed to by path.
Directory size is recursive; it includes sizes of enclosing files/dirs.
:param dir_entry: path to the file or directory. Should not contain wildcards.
 Must be of type DirEntry.
:return: size in bytes

Definition at line 170 of file helpers.py.

5.7.1.6 `get_immediate_subdirs()`

```
def codar.cheetah.helpers.get_immediate_subdirs (
    dir_path )
```

Get a list of top-level subdirectories.
:param dir_path: Directory path to search
:return: list of subdirectory names

Definition at line 141 of file helpers.py.

5.7.1.7 `is_campaign_directory()`

```
def codar.cheetah.helpers.is_campaign_directory (
    path )
```

Return True if the specified path exists, is a directory, and has a .campaign file to indicate it's a top level campaign directory.

Definition at line 186 of file helpers.py.

5.7.1.8 is_executable()

```
def codar.cheetah.helpers.is_executable (
    fpath )
```

Definition at line 107 of file helpers.py.

5.7.1.9 json_config_set_option()

```
def codar.cheetah.helpers.json_config_set_option (
    filename,
    key,
    value )
```

Definition at line 201 of file helpers.py.

5.7.1.10 make_executable()

```
def codar.cheetah.helpers.make_executable (
    path )
```

Definition at line 14 of file helpers.py.

5.7.1.11 parse_timedelta_seconds()

```
def codar.cheetah.helpers.parse_timedelta_seconds (
    v )
```

Parse a time duration. Can be a number of seconds (integer only), a timedelta object, or a string in "HH:MM:SS" format. Returns the number of seconds in the duration as an int, safe for JSON serialization or passing to time.sleep.

```
>>> parse_timedelta_seconds('15')
15
>>> parse_timedelta_seconds('01:15')
75
>>> parse_timedelta_seconds('10:00:05')
36005
>>> parse_timedelta_seconds(12345)
12345
>>> parse_timedelta_seconds(datetime.timedelta(days=1, seconds=7))
86407
>>> parse_timedelta_seconds(1.1)
Traceback (most recent call last):
...
ValueError: Invalid duration (must be timedelta, int, or 'HH:MM:SS'): 1.1
>>> parse_timedelta_seconds("12:34:34bad")
Traceback (most recent call last):
...
ValueError: Invalid duration string, must be HH:MM:SS format
```

Definition at line 29 of file helpers.py.

5.7.1.12 `relative_or_absolute_path()`

```
def codar.cheetah.helpers.relative_or_absolute_path (
    prefix,
    path )
```

If path is an absolute path, return as is, otherwise pre-pend prefix.

Definition at line 130 of file helpers.py.

5.7.1.13 `relative_or_absolute_path_list()`

```
def codar.cheetah.helpers.relative_or_absolute_path_list (
    prefix,
    path_list )
```

Definition at line 137 of file helpers.py.

5.7.1.14 `require_campaign_directory()`

```
def codar.cheetah.helpers.require_campaign_directory (
    path )
```

Raise CheetahException if the specified path is not a top-level campaign directory.

Definition at line 193 of file helpers.py.

5.7.1.15 `swift_escape_string()`

```
def codar.cheetah.helpers.swift_escape_string (
    s )
```

Escape backslashes and double quotes in string, so it can be embedded in a literal swift string when generatig swift source code.

Definition at line 19 of file helpers.py.

5.8 codar.cheetah.launchers Namespace Reference

Classes

- class [Launcher](#)

Variables

- string `TAU_PROFILE_PATTERN` = "codar.cheetah.tau-{code}"

5.8.1 Detailed Description

Class model for "launchers", which are responsible for taking an application and mediating how it is run on a super computer or local machine. The only supported launcher currently is swift-t. Swift allows us to configure how each run within a sweep is parallelized, and handles details of submitting to the correct scheduler and runner when passed appropriate options.

5.8.2 Variable Documentation

5.8.2.1 TAU_PROFILE_PATTERN

```
string codar.cheetah.launchers.TAU_PROFILE_PATTERN = "codar.cheetah.tau-{code}"
```

Definition at line 25 of file launchers.py.

5.9 codar.cheetah.loader Namespace Reference

Functions

- def `load_experiment_class` (file_path)

5.9.1 Detailed Description

Functions for loading experiment python files by path.

Requires Python 3.3+

5.9.2 Function Documentation

5.9.2.1 load_experiment_class()

```
def codar.cheetah.loader.load_experiment_class (  
    file_path )
```

Given the path to a python module containing an experiment, load the module and find and return the class.

Definition at line 12 of file loader.py.

5.10 codar.cheetah.machine_launchers Namespace Reference

Functions

- def [get_launcher](#) (machine, output_directory, num_codes)

Variables

- [machine_launchers](#) = dict()

5.10.1 Function Documentation

5.10.1.1 [get_launcher\(\)](#)

```
def codar.cheetah.machine_launchers.get_launcher (
    machine,
    output_directory,
    num_codes )
```

Definition at line 12 of file machine_launchers.py.

5.10.2 Variable Documentation

5.10.2.1 [machine_launchers](#)

```
codar.cheetah.machine_launchers.machine_launchers = dict()
```

Definition at line 4 of file machine_launchers.py.

5.11 codar.cheetah.model Namespace Reference

Classes

- class [Campaign](#)
- class [Run](#)
- class [RunComponent](#)

Variables

- [RESERVED_CODE_NAMES](#) = set(['post-process'])

5.11.1 Detailed Description

Object oriented model to represent jobs to run on different Supercomputers or workstations using different schedulers and runners (for running applications on compute nodes from front end nodes), and allow pass through of scheduler or runner specific options.

Subclasses representing specific types of schedulers, runners, and supercomputers (machines) are specified in other modules with the corresponding name.

5.11.2 Variable Documentation

5.11.2.1 RESERVED_CODE_NAMES

```
codar.cheetah.model.RESERVED_CODE_NAMES = set(['post-process'])
```

Definition at line 36 of file model.py.

5.12 codar.cheetah.parameters Namespace Reference

Classes

- class [CodeCommand](#)
- class [Instance](#)
- class [Param](#)
- class [ParamADIOS2XML](#)
- class [ParamAdiosXML](#)
- class [ParamCmdLineArg](#)
- class [ParamCmdLineOption](#)
- class [ParamConfig](#)
- class [ParamEnvVar](#)
- class [ParameterValue](#)
- class [ParamKeyValue](#)
- class [ParamRunner](#)
- class [ParamSchedulerArgs](#)
- class [SummitOpts](#)
- class [Sweep](#)
- class [SweepGroup](#)
- class [SymLink](#)

5.12.1 Detailed Description

Module containing classes for specifying parameter value sets and groupings of parameters. Used in the Experiment specification in the 'runs' variable.

5.13 codar.cheetah.pbs Namespace Reference

Functions

- def `open_pbs_file` (scheduler_dir_path, name, project, nodes, walltime)
- def `write_run_script` (script_out_path, scheduler_dir_path)

Variables

- string `PBS_NAME` = 'job.pbs'
- string `PBS_FORMAT_TEMPLATE`
- string `SUBMIT_FORMAT_TEMPLATE`

5.13.1 Detailed Description

Module for generating PBS files for executing many jobs with the same number of nodes.

TODO: define a common interface for schedulers, that works with at least SLURM and PBS.

TODO: codify dir structure - scheduler dir contains scheduler script, has subdir for each set of experiment parameters.

5.13.2 Function Documentation

5.13.2.1 `open_pbs_file()`

```
def codar.cheetah.pbs.open_pbs_file (  
    scheduler_dir_path,  
    name,  
    project,  
    nodes,  
    walltime )
```

Open and write a PBS file to the specified path and return the open file object for further writing. Caller is responsible for closing the file.

TODO: rather than passing back a file, this should probably return an object with an 'add_run' function. There should also be a template for the run output dir set somewhere - maybe other modules handle that, it should not be scheduler specific.

Definition at line 38 of file pbs.py.

5.13.2.2 write_run_script()

```
def codar.cheetah.pbs.write_run_script (
    script_out_path,
    scheduler_dir_path )
```

Write a bash script that will submit a PBS file generated by 'open_pbs_file' with the correct working directory and environment. This is the end user (experiment runner)'s entry point to start the experiment.

Definition at line 55 of file pbs.py.

5.13.3 Variable Documentation

5.13.3.1 PBS_FORMAT_TEMPLATE

```
string codar.cheetah.pbs.PBS_FORMAT_TEMPLATE
```

Initial value:

```
1 = """
2 #!/bin/bash
3 #PBS -N {name}
4 #PBS -A {project}
5 #PBS -l nodes={nodes}
6 #PBS -l walltime={walltime}
7
8 """
```

Definition at line 18 of file pbs.py.

5.13.3.2 PBS_NAME

```
string codar.cheetah.pbs.PBS_NAME = 'job.pbs'
```

Definition at line 15 of file pbs.py.

5.13.3.3 SUBMIT_FORMAT_TEMPLATE

```
string codar.cheetah.pbs.SUBMIT_FORMAT_TEMPLATE
```

Initial value:

```
1 = """
2 #!/bin/bash
3
4 cd "{scheduler_directory}"
5 qsub {pbs_name}
6 """
```

Definition at line 30 of file pbs.py.

5.14 codar.cheetah.report_generator Namespace Reference

Classes

- class [_ReportGenerator](#)
- class [_RunParser](#)

Functions

- def [generate_report](#) (campaign_directory, user_run_script, output_file_path)

5.14.1 Detailed Description

Generate performance report from a completed campaign.
This module parses all run directories in all sweep groups to aggregate information.
Runs sosflow analysis to collect data.

All parameters specified in the spec file must be used as column headers in an output csv file.

5.14.2 Function Documentation

5.14.2.1 generate_report()

```
def codar.cheetah.report_generator.generate_report (
    campaign_directory,
    user_run_script,
    output_file_path )
```

This is a post-run function.
It walks the campaign tree and retrieves performance information about all completed runs.

Definition at line 401 of file report_generator.py.

5.15 codar.cheetah.runners Namespace Reference

Classes

- class [Runner](#)
- class [RunnerCray](#)
- class [RunnerLocal](#)

5.15.1 Detailed Description

TODO: unused currently by SwiftLauncher, but may still be needed, so keeping this module for now.

5.16 codar.cheetah.status Namespace Reference

Functions

- def [print_campaign_status](#) (campaign_directory, filter_user=None, filter_group=None, filter_run=None, filter_code=None, group_summary=False, run_summary=False, print_logs=False, log_level='DEBUG', return_codes=False, print_output=False, show_parameters=False)

    run_summary = False,
    print_logs = False,
    log_level = 'DEBUG',
    return_codes = False,
    print_output = False,
    show_parameters = False )
```

Definition at line 22 of file status.py.

5.17 codar.cheetah.templates Namespace Reference

Variables

- string [CAMPAIGN_ENV_TEMPLATE](#)
- string [GROUP_ENV_TEMPLATE](#)

5.17.1 Detailed Description

Templates for cheetah configuration. This should be used as little as possible: ideally scripts should be stored separately and be independently testable. For example, bash scripts can use environment variables for customization instead of being templates.

5.17.2 Variable Documentation

5.17.2.1 CAMPAIGN_ENV_TEMPLATE

string codar.cheetah.templates.CAMPAIGN_ENV_TEMPLATE

Initial value:

```
1 = """
2 export CODAR_CHEETAH_EXPERIMENT_DIR="{experiment_dir}"
3 export CODAR_CHEETAH_MACHINE_CONFIG="{machine_config}"
4 export CODAR_CHEETAH_APP_CONFIG="{app_config}"

Chapter 6

Class Documentation

6.1 codar.cheetah.report_generator._ReportGenerator Class Reference

Public Member Functions

- def `__init__` (self, `campaign_directory`, `user_run_script`, `output_filename`)
- def `parse_campaign` (self)
- def `parse_user_campaigns` (self)
- def `parse_sweep_group` (self, `group_dir`)
- def `parse_run_dir` (self, `run_dir`, `exit_status`)
- def `write_output` (self)

Public Attributes

- `parsed_runs`
- `unique_keys`
- `campaign_directory`
- `user_run_script`
- `output_filename`
- `current_campaign_user`
- `run_status`

6.1.1 Detailed Description

Definition at line 228 of file `report_generator.py`.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 `__init__()`

```
def codar.cheetah.report_generator._ReportGenerator.__init__ (
    self,
    campaign_directory,
    user_run_script,
    output_filename )
```

Definition at line 232 of file `report_generator.py`.

6.1.3 Member Function Documentation

6.1.3.1 `parse_campaign()`

```
def codar.cheetah.report_generator._ReportGenerator.parse_campaign (
    self )

: return:
```

Definition at line 259 of file `report_generator.py`.

6.1.3.2 `parse_run_dir()`

```
def codar.cheetah.report_generator._ReportGenerator.parse_run_dir (
    self,
    run_dir,
    exit_status )
```

Parse run directory of a sweep group

Definition at line 331 of file `report_generator.py`.

6.1.3.3 `parse_sweep_group()`

```
def codar.cheetah.report_generator._ReportGenerator.parse_sweep_group (
    self,
    group_dir )
```

Parse sweep group and get post-run performance information

Definition at line 304 of file `report_generator.py`.

6.1.3.4 parse_user_campaigns()

```
def codar.cheetah.report_generator._ReportGenerator.parse_user_campaigns (
    self )

: return:
```

Definition at line 273 of file report_generator.py.

6.1.3.5 write_output()

```
def codar.cheetah.report_generator._ReportGenerator.write_output (
    self )

: return:
```

Definition at line 388 of file report_generator.py.

6.1.4 Member Data Documentation

6.1.4.1 campaign_directory

```
codar.cheetah.report_generator._ReportGenerator.campaign_directory
```

Definition at line 241 of file report_generator.py.

6.1.4.2 current_campaign_user

```
codar.cheetah.report_generator._ReportGenerator.current_campaign_user
```

Definition at line 254 of file report_generator.py.

6.1.4.3 output_filename

```
codar.cheetah.report_generator._ReportGenerator.output_filename
```

Definition at line 251 of file report_generator.py.

6.1.4.4 parsed_runs

`codar.cheetah.report_generator._ReportGenerator.parsed_runs`

Definition at line 235 of file `report_generator.py`.

6.1.4.5 run_status

`codar.cheetah.report_generator._ReportGenerator.run_status`

Definition at line 257 of file `report_generator.py`.

6.1.4.6 unique_keys

`codar.cheetah.report_generator._ReportGenerator.unique_keys`

Definition at line 239 of file `report_generator.py`.

6.1.4.7 user_run_script

`codar.cheetah.report_generator._ReportGenerator.user_run_script`

Definition at line 247 of file `report_generator.py`.

The documentation for this class was generated from the following file:

- [report_generator.py](#)

6.2 `codar.cheetah.report_generator._RunParser` Class Reference

Public Member Functions

- `def __init__ (self, run_dir, exit_status, user_run_script)`
- `def read_fob_json (self)`
- `def get_rc_names (self)`
- `def get_run_params (self)`
- `def read_sos_perf_data (self)`
- `def get_cheetah_perf_data (self)`
- `def read_adios_output_file_sizes (self)`
- `def read_node_layout (self)`
- `def execute_user_run_script (self)`
- `def verify_run_successful (self)`
- `def serialize_params_nested_dict (self, nested_run_params_dict)`

Public Attributes

- [run_dir](#)
- [exit_status](#)
- [user_run_script](#)
- [serialized_run_params](#)
- [fob_dict](#)
- [rc_names](#)
- [rc_working_dir](#)
- [rc_name_exe](#)

6.2.1 Detailed Description

Definition at line 22 of file report_generator.py.

6.2.2 Constructor & Destructor Documentation

6.2.2.1 __init__()

```
def codar.cheetah.report_generator._RunParser.__init__ (
    self,
    run_dir,
    exit_status,
    user_run_script )
```

Class to parse a run directory.
:param run_dir:

Definition at line 23 of file report_generator.py.

6.2.3 Member Function Documentation

6.2.3.1 execute_user_run_script()

```
def codar.cheetah.report_generator._RunParser.execute_user_run_script (
    self )
```

Definition at line 160 of file report_generator.py.

6.2.3.2 `get_cheetah_perf_data()`

```
def codar.cheetah.report_generator._RunParser.get_cheetah_perf_data (
    self )
```

Definition at line 115 of file `report_generator.py`.

6.2.3.3 `get_rc_names()`

```
def codar.cheetah.report_generator._RunParser.get_rc_names (
    self )
```

Definition at line 52 of file `report_generator.py`.

6.2.3.4 `get_run_params()`

```
def codar.cheetah.report_generator._RunParser.get_run_params (
    self )
```

Definition at line 70 of file `report_generator.py`.

6.2.3.5 `read_adios_output_file_sizes()`

```
def codar.cheetah.report_generator._RunParser.read_adios_output_file_sizes (
    self )
```

```
:return:
```

Definition at line 127 of file `report_generator.py`.

6.2.3.6 `read_fob_json()`

```
def codar.cheetah.report_generator._RunParser.read_fob_json (
    self )
```

Definition at line 46 of file `report_generator.py`.

6.2.3.7 read_node_layout()

```
def codar.cheetah.report_generator._RunParser.read_node_layout (
    self )

: return:
```

Definition at line 149 of file report_generator.py.

6.2.3.8 read_sos_perf_data()

```
def codar.cheetah.report_generator._RunParser.read_sos_perf_data (
    self )

: return: True if sos data was found, False otherwise
```

Definition at line 82 of file report_generator.py.

6.2.3.9 serialize_params_nested_dict()

```
def codar.cheetah.report_generator._RunParser.serialize_params_nested_dict (
    self,
    nested_run_params_dict )
```

codar.cheetah.run-params.json has the structure:

```
{
  app1: {
    param1: value1
    param2: value2
  }
  app2: {
    param1: value1
    param2: value2
  }
}
```

Serialize this structure so that we have
{app1__param1: value1, app1__param2:value2, and so on}.

Definition at line 204 of file report_generator.py.

6.2.3.10 verify_run_successful()

```
def codar.cheetah.report_generator._RunParser.verify_run_successful (
    self )

: return:
```

Definition at line 180 of file report_generator.py.

6.3.1 Detailed Description

An experiment class specifies an application, a set of parameter to sweep over, and a set of supported target machine. A specific instance binds the experiment to a specific machine within the set of supported machines, and supports generating a set of scripts to run the experiment on that machine.

Definition at line 39 of file model.py.

6.3.2 Constructor & Destructor Documentation

6.3.2.1 __init__()

```
def codar.cheetah.model.Campaign.__init__ (
    self,
    machine_name,
    app_dir )
```

Definition at line 117 of file model.py.

6.3.3 Member Function Documentation

6.3.3.1 make_experiment_run_dir()

```
def codar.cheetah.model.Campaign.make_experiment_run_dir (
    self,
    output_dir,
    _check_code_paths = True )
```

Produce scripts and directory structure for running the experiment.

Directory structure will be a subdirectory for each scheduler group, and within each scheduler group directory, a subdirectory for each run.

Definition at line 199 of file model.py.

6.3.4 Member Data Documentation

6.3.4.1 app_config_scripts

- def [as_dict](#) (self)

6.7.1 Detailed Description

Represent an instance of an application with fixed parameters. An application may consist of multiple codes running at the same time, and multiple middleware layers (scheduler like PBS, runner like aprun, or swift), all of which may have their own parameters.

Abstractly, an instance is a two-level nested dict, where the first level indicates the target for a parameter (application code or middleware), and the second level contains the parameter values for that target.

Definition at line 101 of file parameters.py.

6.7.2 Constructor & Destructor Documentation

6.7.2.1 `__init__()`

```
def codar.cheetah.parameters.Instance.__init__ (
    self )
```

Definition at line 113 of file parameters.py.

6.7.3 Member Function Documentation

6.7.3.1 `add_parameter()`

```
def codar.cheetah.parameters.Instance.add_parameter (
    self,
    p,
    idx )
```

Definition at line 129 of file parameters.py.

6.7.3.2 `as_dict()`

```
def codar.cheetah.parameters.Instance.as_dict (
    self )
```

Produce dict (mainly for for JSON serialization) with keys based on parameter names. This ignores the type of the param, it's just the name value pairs.

Definition at line 244 of file parameters.py.

6.7.3.3 as_string()

```
def codar.cheetah.parameters.Instance.as_string (
    self )
```

Get a command line like value for the instance. Note that this only includes positional and option command line args, not config args like adios XML. TODO: deprecate??

Definition at line 199 of file parameters.py.

6.7.3.4 code_commands()

```
def codar.cheetah.parameters.Instance.code_commands (
    self )
```

Wrapper to allow delayed calculation of derived parameter values.

Definition at line 146 of file parameters.py.

6.7.3.5 get_codes_argv()

```
def codar.cheetah.parameters.Instance.get_codes_argv (
    self )
```

Get an `_unordered_dict` mapping code name to list of args for that code. Higher levels of model are responsible for re-ordering as needed.

Definition at line 192 of file parameters.py.

6.7.3.6 get_hostfile()

```
def codar.cheetah.parameters.Instance.get_hostfile (
    self,
    target )
```

Definition at line 232 of file parameters.py.

6.8 codar.cheetah.launchers.Launcher Class Reference

Inheritance diagram for codar.cheetah.launchers.Launcher:

Collaboration diagram for codar.cheetah.launchers.Launcher:

Public Member Functions

- `def __init__ (self, machine_name, scheduler_name, runner_name, output_directory, num_codes)`
- `def create_group_directory (self, campaign_name, app_dir, group_name, runs, max_nprocs, nodes, launch_mode, component_subdirs, walltime, node_exclusive, timeout, machine, sosd_path=None, sos_analysis_path=None, tau_config=None, kill_on_partial_failure=False, run_post_process_script=None, run_post_process_stop_on_failure=False, scheduler_options=None, run_dir_setup_script=None)`
- `def read_jobid (self)`

Public Attributes

- `machine_name`
- `scheduler_name`
- `runner_name`
- `output_directory`
- `num_codes`

Static Public Attributes

- `name` = None
- string `submit_script_name` = 'submit.sh'
- string `wait_script_name` = 'wait.sh'
- string `status_script_name` = 'status.sh'
- string `submit_out_name` = 'codar.cheetah.submit-output.txt'
- string `run_command_name` = 'codar.cheetah.run-params.txt'
- string `run_json_name` = 'codar.cheetah.run-params.json'
- string `run_out_name` = 'codar.cheetah.run-output.txt'
- `batch_script_name` = None
- string `batch_walltime_name` = 'codar.cheetah.walltime.txt'
- string `jobid_file_name` = 'codar.cheetah.jobid.txt'

6.8.1 Detailed Description

Class to represent a single batch job or submission script.
It's job is to take a scheduler group and produce a script for executing all runs within the scheduler group with the indicated scheduler parameters.

The launcher may take configuration parameters to specify which scheduler/runner to use, but there is no longer an object model for schedulers and runners.

Definition at line 28 of file `launchers.py`.

6.8.2 Constructor & Destructor Documentation

6.8.2.1 `__init__()`

```
def codar.cheetah.launchers.Launcher.__init__ (
    self,
    machine_name,
    scheduler_name,
    runner_name,
    output_directory,
    num_codes )
```

Definition at line 54 of file `launchers.py`.

6.8.3 Member Function Documentation

6.8.3.1 create_group_directory()

```
def codar.cheetah.launchers.Launcher.create_group_directory (
    self,
    campaign_name,
    app_dir,
    group_name,
    runs,
    max_nprocs,
    nodes,
    launch_mode,
    component_subdirs,
    walltime,
    node_exclusive,
    timeout,
    machine,
    sosd_path = None,

Collaboration diagram for codar.cheetah.parameters.Param:

Public Member Functions

- `def __init__ (self, target, name, values)`
- `def __get__ (self, idx)`
- `def __len__ (self)`

Public Attributes

- `target`
- `name`
- `values`

6.10.1 Detailed Description

Abstract base class representing a parameter to an application. This includes any method for modifying the run characteristics of an application - command line, config file, environment variables, different executable built with different compiler flags.

Every parameter must have a unique name, and must target a specific application or middleware, e.g. pbs, aprun, or one of the science codes that make up an application.

Note that if a science application has only one code, it will likely still involve middleware targets like PBS. Using a different target is one way to model those.

TODO: is it useful to separate the definition of a param and it's values?

TODO: should we require that the name be unique across all targets, or just within each target? Global uniqueness allows for a simple list of dict representation of instances, but two level nested dicts may be more powerful (first level is target, second level is params).

Definition at line 299 of file parameters.py.

6.10.2 Constructor & Destructor Documentation

6.10.2.1 __init__()

```
def codar.cheetah.parameters.Param.__init__ (

6.18 `codar.cheetah.parameters.ParamKeyValue` Class Reference

Inheritance diagram for `codar.cheetah.parameters.ParamKeyValue`:

Collaboration diagram for codar.cheetah.parameters.ParamKeyValue:

Public Member Functions

- `def __init__(self, target, name, config_filename, key_name, values)`

Public Attributes

- `config_filename`
- `key_name`

6.18.1 Detailed Description

Class to represent replacement of the value in a config file with 'k = v' formatted lines. This should work with various formats, including fortran namelist and INI, by ignoring lines that don't match the simple k = v pattern. It has the advantage of being flexible, but the disadvantage of not understanding sections or other more complicated structure in config files. Also does not do any quoting - if required, the spec writer should include literal quotes around the values.

Note that the filename must be added to the inputs list as well, to be copied to each run directory.

Definition at line 436 of file parameters.py.

6.18.2 Constructor & Destructor Documentation

6.18.2.1 `__init__()`

```
def codar.cheetah.parameters.ParamKeyValue.__init__ (

    component_inputs = None )
```

Definition at line 411 of file model.py.

6.21.3 Member Function Documentation

6.21.3.1 `add_dataspaces_support()`

```
def codar.cheetah.model.Run.add_dataspaces_support (
    self,
    machine )
```

Add support for dataspaces.
Check RC Adios xml files to see if any transport methods are marked
for coupling with DATASPACE/DIMES.
For stage_write, check command line args to see if DATASPACE/DIMES
is specified.
:param machine: The current machine. I dont like this here.
:return:

Definition at line 630 of file model.py.

6.21.3.2 `get_app_param_dict()`

```
def codar.cheetah.model.Run.get_app_param_dict (
    self )
```

Return dictionary containing only the app parameters
(does not include nprocs or exe paths).

Definition at line 625 of file model.py.

6.21.3.3 `get_fob_data_list()`

```
def codar.cheetah.model.Run.get_fob_data_list (
    self )
```

Definition at line 528 of file model.py.

6.21.3.4 `get_total_nprocs()`

```
def codar.cheetah.model.Run.get_total_nprocs (
    self )
```

Definition at line 545 of file model.py.

6.21.3.5 `insert_sosflow()`

```
def codar.cheetah.model.Run.insert_sosflow (
    self,
    sosd_path,
    sos_analysis_path,
    run_path,
    ppn )
```

Insert a new component at start of list to launch sosflow daemon.
Should be called only once.

Definition at line 752 of file model.py.

6.21.4 Member Data Documentation

6.21.4.1 `codes`

```

6.28 `codar.cheetah.parameters.SweepGroup` Class Reference

Inheritance diagram for `codar.cheetah.parameters.SweepGroup`:

Collaboration diagram for `codar.cheetah.parameters.SweepGroup`:

Public Member Functions

- `def __init__ (self, name, parameter_groups, component_subdirs=False, component_inputs=None, walltime=3600, max_procs=None, per_run_timeout=None, sosflow_profiling=False, sosflow_analysis=False, nodes=None, launch_mode=None, run_repetitions=0)`

Public Attributes

- `name`
- `nodes`
- `component_subdirs`
- `max_procs`
- `parameter_groups`
- `walltime`
- `per_run_timeout`
- `sosflow_profiling`
- `sosflow_analysis`
- `component_inputs`
- `launch_mode`
- `run_repetitions`

6.28.1 Detailed Description

Class representing a grouping of run parameters that can be executed by a single scheduler job, because they share the same scheduler parameters.

Note that `nodes` is no longer required - if not specified, it is calculated based on the biggest run within the group.

How this gets converted into a script depends on the target machine and which scheduler (if any) that machine uses.

Definition at line 11 of file `parameters.py`.

6.28.2 Constructor & Destructor Documentation

6.28.2.1 `__init__()`

```
def codar.cheetah.parameters.SweepGroup.__init__ (
